Uniting to Protect Life on Earth

FOR IMMEDIATE RELEASE:

ONLINE GLOBAL 5G PROTEST DAY

Online, around the world, throughout the day, Saturday, April 25th, 2020

This Saturday, the 25th of April will see the second Global Protest Day against the implementation of 5G wireless technology. The event was initiated by [Stop 5G International](#), an aligned group of advocates from around the world who are calling for a stop to 5G and for the implementation of safe wired technology for most internet and telecommunications needs. While Stop 5G International recognizes the extraordinary value of the internet, they oppose the 'internet of things' and 'smart cities', and advocate for safe technology that prioritizes health and well-being over private gain.

As much of the World is in lock-down due to the Pandemic, the Global Protest Day will take novel forms. Online actions will include a [Webinar](#) featuring a panel of distinguished international experts and scholars, who will speak to the health impacts of 5G, as well as privacy and security risks, the internet's footprint, effects on wildlife, and legal actions being taken to address both the deployment of tens of thousands of satellites in space as well as 5G terrestrial systems.

Stop 5G international is also producing a "We Do Not Consent" video with footage from people around the world which will be released on April 25th. Other events are happening as well sponsored by various international groups.
