

A satellite with large solar panels and a parabolic dish antenna is shown in space. The Earth is visible in the background, partially obscured by the satellite's structure. The scene is set against a dark, starry sky.

**Satellites, rockets, and 5G on earth and in the sky.
What is the cost to health and the environment?**

**5G SpaceX Satellite Protest
March 19, 2021 • Hawthorne, CA**

10:00 AM – 2:00 PM

1 Rocket Road, Hawthorne, CA

Parking limited—Uber or bus recommended

Join us and people around the world as we call for an immediate halt to 5G satellites & technology on earth & in space **unless proven safe... and advocate for safer and wiser technology options.**

Up to 100,000 low earth orbit satellites, complementary earth base stations & millions more cell antennas (aka User Terminals) have been approved by the FCC. **SpaceX and other companies are now deploying satellites to provide 5G wireless internet to every corner of the globe**, blanketing the entire planet in wireless radiation with potentially devastating consequences to all life.

Satellites have not been tested for safety. Proven dangers include:

- depletion of the ozone layer
- cyberattacks costing \$ trillions
- pollution from rocket launches (exhaust gases, black carbon, alumina, toxic chemicals)
- space debris & collisions – Kessler Effect
- vast increase in energy consumption
- climate impacts from manufacturing & disposal of all connected “things” & infrastructure
- interference with the global electrical circuit
- potential disruption to satellites & connected IoT networks from solar flares
- effects on navigation & survival of wildlife

“The Heavens, our planet’s last precious frontier, are not a commodity to be bought and sold and degraded for private commercial gain.”

Check out the [Healthy Heavens Trust Declaration](#) and the [5G Space Appeal](#) and join the growing number of people calling for a safe and balanced technology future.
